

# 24-hour BP Monitor

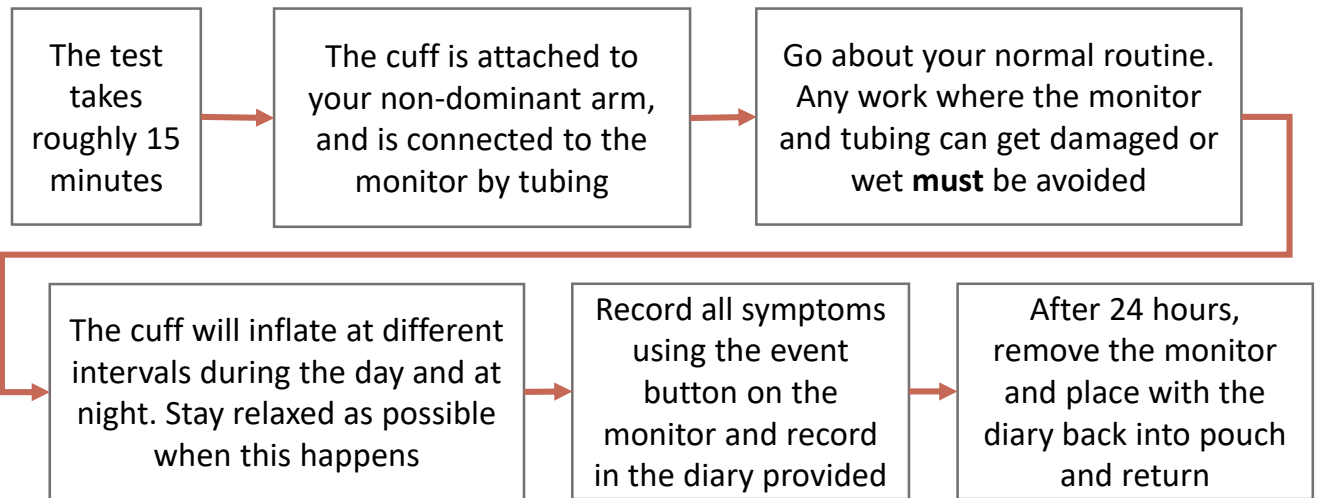

## Why do I need this test?

The test is used to measure your blood pressure continuously over 24 hours. Your doctor may recommend this test for the following reasons:

- If you are experiencing high blood pressure (either constant or irregular)
- To see if your blood pressure is well managed

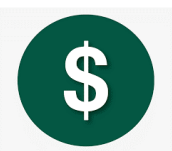

## What can I expect during the test?

## What are the risks of the test?

Slight pain and numbness after a reading is normal, however if this persists and becomes unbearable, remove the cuff and call Heartscope. You may also experience bruising and swelling, however this is uncommon.

## How do I prepare for the test?

**This test is NOT covered by Medicare.** You will need to cover the costs yourself

You cannot shower while wearing the monitor

Please bring along a \$50 security deposit in either cash or card (in case the monitor is returned late or has been damaged). This will be refunded to you after 24 hours once the monitor is returned
